

Easy to mix • Easy to apply
High-quality finish • Wide application range

Siniat EasyLite skimming plaster is the perfect product to create a smooth surface, whether the area is big or small. In some instances, all you will need is a single coat of skim plastering, but at other times, you may want to build up a level, crack-resistant surface by layering several coats. Skim plastering provides many benefits of a conventional solid plaster finish and a swift turnaround on site. However, skimming is a time-sensitive task. Once you're underway, you'll need to work quickly to finish the job before things set. So make sure you have everything you need when you start. EasyLite remains workable for up to an hour, and this plaster will start setting around 60 - 90 minutes.

EasyLite Multipurpose Skimming Plaster
 is available in 40kg and 20kg

EasyLite Skimming Plaster for Coastal Areas
 is available only in 40kg

Covering capacity

The approximate coverage of the 20kg and 40kg bags of Siniat EasyLite plaster is detailed in the table below. These coverage rates are according to laboratory tests.

EASILY DETERMINE THE M² COVERAGE PER 20KG/40KG BAGS

Thickness in mm	3	4	5	6	7	8	9	10
20KG bag m² coverage	12	10	8	6,5	5,5	5	4,5	4
40KG bag m² coverage	24	20	16	13	11	10	9	8

Recommended application thickness on plasterboard is 3mm.
 Recommended application thickness on sand and cement is 5 - 10mm.

Introducing siniat easylite skimming plasters

#SmootherThanAnything

Plaster skimming to plasterboard is a popular method of providing a seamless surface ready for decorative treatment. Here are tips to help you achieve a smooth finish every time.

- + Dry plaster on your tools can slow you down on your next job because it is hard to remove, so clean as you go. Clean equipment will ensure you get the best out of your EasyLite skimming or coastal plaster.
- + Always use clean water. Contaminated water can interfere with the setting time and performance of the plaster.
- + The right tools will make it easier to achieve a professional finish. A clean, rust-free trowel is a vital piece of equipment.
- + Take good care of your metal trowel; it is much easier to use, especially once worn in.
